Marine and subsea survey refers to the process of collecting data and information about underwater environments, structures, and resources using specialized equipment and techniques. These surveys are conducted in oceans, seas, lakes, rivers, and other bodies of water to gather data for various purposes, including navigation, exploration, environmental assessment, and resource management. Marine and subsea surveys may involve the use of remotely operated vehicles (ROVs), autonomous underwater vehicles (AUVs), sonar systems, hydrographic survey equipment, and other technologies to map underwater terrain, locate submerged objects, assess marine habitats, and monitor environmental conditions. The data collected from these surveys are used by governments, industries, researchers, and other stakeholders to make informed decisions and manage marine and coastal areas effectively.
