Marine oil hose, also known as marine fuel hose or marine fuel line, is a type of hose used to transfer various types of oil and petroleum-based products from one location to another in marine environments. These hoses are typically designed to handle a variety of fuels, including diesel, gasoline, and other petroleum-based products, and are designed to withstand the harsh conditions that are often encountered in marine applications. They are used on ships, oil rigs, and other vessels to transfer fuel from storage tanks to engines and other equipment. Marine oil hoses are typically constructed with durable materials, such as synthetic rubber, and are reinforced with layers of braided or spiraled steel wire to provide resistance to pressure, abrasion, and other environmental factors.
