The global Marine Podded Propulsion System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Marine Podded Propulsion System is one type of azimuth propulsion consisting of an integrated electric motor / propeller unit mounted on the same shaft, installed in a gondola under the stern of the ship. The gondola revolves around a vertical axis suitably orienting the propeller so as to control the direction of motion. Typical of the evolved Podded propulsion is that the propeller pulls the ship as opposed to the conventional, less efficient pushing action.
