The global Marine Refrigeration Compressor Oil market size is predicted to grow from US\$ 159 million in 2025 to US\$ 225 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Marine refrigeration compressor oil is a special lubricant developed specifically for compressors in marine refrigeration, freezing, and air conditioning systems. Its core functions are to provide reliable lubrication, sealing, cooling, and system cleaning, solving key problems encountered by ships operating offshore for extended periods, such as decreased refrigeration system efficiency, frequent malfunctions, and difficult maintenance due to vibration, corrosion, refrigerant incompatibility, and oil deterioration. This ensures safe cold chain transportation and a stable environment in crew living quarters. The upstream mainly includes producers of base oils and additives. Base oils (such as mineral oil, alkylbenzene, and synthetic esters) provide the lubrication basis, while additives (antioxidants, anti-wear agents, acid neutralizers, etc.) impart special properties. Downstream, it directly serves end-users in the marine industry through ship management companies, equipment agents, and port supply service providers. In 2025, the production of marine refrigeration compressor oil was approximately 65,000 tons, with an average price of approximately US\$2,500 per ton, a gross profit margin of approximately 40%, and a single-line capacity of approximately 800 tons per year.
