The global Marine Semaphore Stations and Buoys market size is predicted to grow from US\$ 972 million in 2025 to US\$ 1302 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Marine semaphore stations and buoyss are instruments which collect weather and ocean data within the world's oceans, as well as aid during emergency response to chemical spills, legal proceedings, and engineering design. Wind data from buoys has smaller error than that from ships. There are differences in the values of sea surface temperature measurements between the two platforms as well, relating to the depth of the measurement and whether or not the water is heated by the ship which measures the quantity.
