Marine Simulator Systems are professional training and testing systems that use computer simulation technology, 3D visualization, ship dynamics models, virtual reality technology, and real-time data interaction to simulate ship handling, navigation environments, engine room operations, and maritime activities. These systems typically include bridge simulators, engine room simulators, integrated ship bridge simulators, and other specialized maritime training equipment. They can reproduce different vessel types, sea conditions, port environments, and emergency scenarios, and are widely used for crew training, competency assessment, maritime research, ship design verification, and safety drills.

The global Marine Simulator System market is primarily driven by International Maritime Organization (IMO) training requirements, increasing maritime safety standards, smart shipping development, and digital transformation in the maritime industry. With the growth of global vessel fleets, higher levels of ship automation, and the advancement of autonomous and intelligent vessel technologies, shipowners, shipping companies, and maritime training institutions are increasing investments in advanced simulation equipment. The market is mainly served by companies from Europe, Japan, North America, and China, with European and Japanese suppliers holding advantages in high-
