The global Marine Solid State Radar market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Marine solid state radars are radar detectors installed on ships for navigation avoidance, ship positioning, and narrow channel navigation. Wavelet electromagnetic waves are emitted when the echo is received, which helps to identify the range, angle or velocity of the target, Solid state radar generates radio waves of a fixed frequency. Marine solid state radars offer advantages for maritime navigation and collision avoidance. It provides mariners with the necessary means of observation when visibility is poor, and even in adverse weather or climatic conditions, they can detect stationary and moving objects, which helps avoid accidents.
