Mash Filter, a wort separation device that can be used as an alternative to a lauter tun or a mash/lauter vessel. The mash filter is essentially a plate and frame filter press fitted with series of fine filters for separating spent grist from sweet wort.

The global mash filter market is expected to witness a significant growth in the coming years. This can be attributed to various factors such as increasing demand for craft beer, rising consumer preference for high-quality beer, and the advantages offered by mash filter technology. Craft beer is gaining popularity worldwide due to its unique flavors and variety. Mash filters are widely used in the production of craft beer as they provide more control over the brewing process and help in achieving desired flavors and aromas. This is expected to drive the demand for mash filters in the craft beer industry.
