In 2024, the global production of masonry robots will reach 106 units, with an average selling price of US$800k per unit.Masonry robots are intelligent, automated equipment designed specifically for construction, primarily used for wall or structural masonry operations. They integrate a robotic arm, mortar delivery system, brick handling system, and positioning and control systems. They automatically apply mortar and precisely place bricks or blocks, automating the construction of building walls. Masonry robots can improve construction efficiency, reduce labor costs, minimize construction errors and safety risks, and adapt to the trends of prefabricated, industrialized, and green construction. Modern masonry robots typically combine CAD/BIM drawings, laser positioning, and visual recognition technology to intelligently lay bricks according to design drawings, ensuring wall flatness and structural accuracy.

United States market for Masonry Robot is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Masonry Robot is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
