The global Mass Spec Grade Lys-C market size is predicted to grow from US$ 23.6 million in 2025 to US$ 35.8 million in 2031; it is expected to grow at a CAGR of 7.2% from 2025 to 2031.

Endoproteinase Lys-C, Mass Spec Grade, is a highly-purified serine protease that hydrolyzes specifically at the carboxyl side of lysines. Lys-C retains proteolytic activity under strong protein denaturing conditions such as 8M urea, which can be used to improve digestion of proteolytically resistant proteins.

The Lys C market is driven by the increasing demand for efficient and specific proteolytic enzymes in various proteomic and biotechnological applications. Lys C is an endopeptidase enzyme that cleaves peptide bonds on the C-terminal side of lysine residues, enabling protein digestion for mass spectrometry-based proteomics and protein analysis. The rise in proteomic research, including protein characterization, post-translational modification analysis, and structural studies, contributes to market growth as researchers seek high-quality Lys C enzymes that offer reliable and consistent results. Moreover, advancements in mass spectrometry techniques and the need for in-depth protein profiling align with the increased use of Lys C in complex sample analysis. However, the market also faces challenges, such as enzyme stability and optimal digestion conditions, which impact reproducibility and efficiency. Additionally, addressing concerns related to enzyme purity and compatibility with various sample types can pose obstacles for manufacturers. To succeed, companies must focus on enzyme formulation optimization, quality assurance, and addressing the challenges to provide researchers with reliable and effective Lys C enzymes that enhance proteomic
