The global Massage Therapy Robot market size is predicted to grow from US\$ 946 million in 2025 to US\$ 2739 million in 2032; it is expected to grow at a CAGR of 16.3% from 2026 to 2032.

Massage Therapy Robot generally refers to robotic systems equipped with robotic arms, AI vision, force-feedback control, and intelligent therapy algorithms that can autonomously perform massage, rehabilitation therapy, and sports recovery treatments. Under the narrow industry definition, traditional massage chairs are typically excluded, while AI robotic massage systems, rehabilitation robots, autonomous wellness robots, and intelligent physiotherapy robots are included. In 2025, global Massage Therapy Robot production reached approximately 157.01 K Units. The upstream segment of the Massage Therapy Robot industry mainly consists of core component suppliers, AI software developers, and sensor manufacturers. Key components include servo motors, precision reducers, robotic arms, soft actuators, pressure and torque sensors, thermal therapy modules, EMS stimulation modules, vision cameras, and AI processors. The downstream segment mainly covers home healthcare, rehabilitation centers, sports recovery, elderly care, wellness spas, and autonomous wellness service stations.

Key growth drivers include global population aging, increasing prevalence of chronic muscle pain, rising sports recovery demand, expanding rehabilitation healthcare spending, and shortages of professional massage therapists. At the same time, advances in AI vision, soft robotics, force-feedback control, and large-model interaction technologies are significantly improving the personalization and precision of massage therapy robot.
