Material jetting is the equipment which could mold materials with material jetting technology. Material jetting has the added advantage of being able to 5D print using multiple materials at once. Objects can be produced with a variety of materials as well as customize the specific area where those materials are placed. This eliminates the need to print separate layers of different materials and assemble them later. In a single run, one can produce complete products with parts made from separate materials.

The global Material Jetting market size is projected to grow from US$ 92 million in 2023 to US$ 114.8 million in 2030; it is expected to grow at a CAGR of 3.2% from 2024 to 2030.
