Manufacturing resource planning (MRP), also known as material requirements planning systems or MRP II software, helps streamline the manufacturing process through production planning, scheduling, and inventory control. Known as a leading type of manufacturing software, MRP systems allow manufacturers to plan and calculate material requirements, coordinate personnel and machine workloads, and optimally plan purchasing to meet customer demands.

MRP also aids in inventory and production schedules to produce products and complete manufacturing jobs. An MRP system determines which assemblies must be built, what materials must be purchased, and the order in which to build products to meet customer due dates.

MRP software can work for all types of companies in the manufacturing industry, including in make to order, engineer to order, and a discrete manufacturing process.
