Matrigel gel cell culture medium is a special culture medium used for cell culture, which contains matrix components as the main scaffold or matrix. This culture medium is usually composed of natural or synthetic biological materials, such as gelatin, collagen, alginate, etc., and is used to provide the physical support and biochemical signals required by the cells for growth and differentiation. Matrigel gel cell culture medium can simulate the microenvironment of in vivo tissues and help cells grow, differentiate and interact in three-dimensional structures. Therefore, it has important application value in tissue engineering, regenerative medicine, drug screening and other fields.

The global Matrigel Gel Cell Culture Medium market size is projected to grow from US\$ 438 million in 2024 to US\$ 699 million in 2030; it is expected to grow at a CAGR of 8.1% from 2024 to 2030.
