The global MBBR Technology market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

MBBR Technology (Moving Bed Biofilm Reactor) is a highly efficient biological treatment process for wastewater treatment that combines the advantages of traditional activated sludge method and fixed biofilm technology. MBBR technology adds specially designed fillers in suspension in the reactor, allowing microorganisms to attach to the surface of the fillers to form a biofilm. When the wastewater flows between the fillers, the pollutants are degraded by the microorganisms on the biofilm, thereby achieving wastewater purification. Because the fillers are constantly stirred and circulated in the reactor, this technology does not require return sludge or complex operations. It is simple to operate and occupies a small area, making it suitable for water treatment projects of various sizes.

United States market for MBBR Technology is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
