MBS is an impact modifier formed by ternary copolymerization of methyl methacrylate, butadiene and styrene. It has a typical core-shell structure in sub-micron size. The core is a rubber phase with a diameter of 10-100nm. Because methyl methacrylate and PVC have similar solubility parameters, it acts as an interface bonding agent between PVC resin and rubber. Add 5%-10 to PVC and PVC phase. % MBS resin can increase the impact strength of the product by 4-15 times, and at the same time improve the weather resistance and processing fluidity of the product. Therefore, MBS resin has been widely used as a PVC impact modifier.

At present, major global manufacturers include Dow, Kaneka, LGchem, Wanda Chemical, Mitsubishi Chemical, etc. The top five manufacturers account for more than 60% of the market.

From a regional perspective, China is the world's most important consumption area.

China's MBS consumption accounts for about 35% of the global total, it is developing rapidly. Secondly, Europe and North America have made greater contributions to the consumption of MBS.
