The global MCP Server Infrastructure Platforms Software market size is predicted to grow from US$ 807 million in 2025 to US$ 1260 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

A category of software platforms known as MCP server infrastructure platforms software provides standardized tool invocation and external system connectivity for AI agents and large language model applications. It essentially acts as the "operating system" and "management foundation" between AI and the digital world, exposing diverse infrastructure resources such as databases, APIs, cloud services, and SaaS applications to AI models in a secure, controllable, and observable manner—through building, deploying, operating, and managing MCP servers. Its core value lies in offering development frameworks and hosting environments, centralized security governance (e.g., authentication, authorization, and auditing), service discovery and registration, and full-lifecycle operations management capabilities. This solves AI silo issues and enables AI to securely and efficiently operate real?world tools and systems, serving as the standardized interface layer that connects intelligence with infrastructure in the era of AI agents.

Currently, the market for mcp server infrastructure platforms software is at a critical stage transitioning from proof-of-concept to large-scale deployment. As AI agent technologies penetrate deeply into various industries, the demand for standardized, secure, and governable tool?calling infrastructure becomes increasingly urgent. This field is showing trends toward platformization and integration, with a diverse range of solutions emerging across development frameworks, hosting services, security gateways, service catalogs, and more. Meanwhile, technical architectures are evolving toward stateless, lightweight, and edge?native deployments to reduce operational
