Meat aging cabinets are specialized refrigeration units designed to age meat, particularly beef, under controlled conditions to enhance its flavor, tenderness, and texture. These cabinets maintain precise temperature, humidity, and airflow to create an optimal environment for the aging process, which can last from a few weeks to several months. By allowing natural enzymes in the meat to break down muscle fibers, meat aging cabinets improve the meat's quality, making it more tender and flavorful. They are commonly used in high-end restaurants, butcher shops, and gourmet markets to produce premium dry-aged meats.
