Meat aging fridges, also known as dry-aging refrigerators, are specialized appliances designed to age meat, particularly beef, in a controlled environment to enhance its flavor and tenderness. These fridges maintain precise temperature, humidity, and airflow conditions, typically around 34-38°F (1-3°C) with 80-85% humidity, to promote the natural enzymatic and microbial processes that break down muscle fibers and concentrate flavors. Equipped with UV light to prevent bacterial growth and often featuring Himalayan salt blocks to regulate humidity, meat aging fridges ensure a consistent and safe aging process, resulting in high-quality, richly flavored aged meat suitable for gourmet cooking.

The global Meat Aging Fridges market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
