Bone meal is made from defatted, dried animal bones that are ground to a fine powder. It's a mineral supplement. It's high in calcium and phosphorus. Bone meal is used for fertilizer and animal feed.

Meat and bone meal (MBM) is a natural source of protein and minerals including calcium, phosphorus and fat, which is used as an ingredient in the feed industry for laying hens, poultry, swine, and other non-ruminant species.

MBM is widely used in the United States as a low-cost animal protein in dog food and cat food. In Europe, some MBM is used as ingredients in pet food, but the majority is now used as a fossil-fuel replacement for energy generation, as a fuel in cement kilns, landfilling or incineration.

Global key players of bone meal include Darling Ingredients, Sanimax, FASA Group, etc. North America is the largest producer of bone meal, holds a share about 70%, followed by Europe, and China. In terms of product, cow and sheep ingredients is the

largest segment, with a share over 70%. And in terms of application, the largest segment is animal feed, with a share over 40%.
