Plastic packaging for meat refers to plastic materials used to package meat products to maintain their freshness and hygiene. These plastic packaging can be in various forms, such as plastic films, plastic bags, plastic boxes and trays. They usually have barrier properties, which can prevent oxygen, moisture and other external factors from entering the interior of the packaging, thereby extending the shelf life of meat. Plastic packaging is easy to carry and use, and it is also convenient for displaying and selling meat products in supermarkets and retail stores.

However, the impact of plastic packaging on the environment has also attracted people's attention. Plastic is not easy to degrade, and if it is not handled properly, it may cause long-term pollution to the environment. Therefore, some alternatives, such as degradable plastics, paper packaging or other bio-based materials, are being studied and developed to reduce the impact of plastic packaging on the environment.
