The global Mechanical Agitation Flotation Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Flotation machine is the abbreviation of floating concentrator, refers to the completion of flotation process equipment. In the flotation machine, the ore particles and the flotation agent are mixed and stirred to form a slurry, wherein some of the ore particles are selectively fixed on the bubbles, and then float up to the slurry surface, and the remaining ore particles are retained in the slurry to achieve froth flotation mineral separation.

For mechanical agitation flotation machine, the aeration and agitation of the slurry are completed by the impeller and mechanical agitation device of the flotation machine. It belongs to the external gas self-priming flotation machine, generally the upper gas suction type, that is, air inhaled near the mechanical stirring device in the lower part of the flotation tank. This kind of flotation machine can not only self-prime air, but also self-priming slurry. It is easy to realize self-flow when returning the ore middlings, less auxiliary equipment, neat equipment configuration, simple operation and maintenance, etc. But this type of machine has small inflation and high power consumption.

United States market for Mechanical Agitation Flotation Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Mechanical Agitation Flotation Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
