Mechanical Bar Screen is a wastewater pretreatment device installed at the inlet of sewage treatment plants, pumping stations, or water intake structures to automatically remove large solid debris from flowing water. It consists of a bar rack (screen bars), a mechanical raking or cleaning mechanism, drive unit, and discharge system, which together capture and lift materials such as plastics, rags, leaves, and other coarse solids out of the wastewater stream. Upstream, the equipment depends on stainless steel screen bars, chains or rake arms, motors, gearboxes, and control panels; midstream manufacturers perform hydraulic design, fabrication, and integration into channels or chambers; downstream, it is widely applied in municipal wastewater plants, industrial pretreatment facilities, and drainage or intake protection systems, where it protects pumps and downstream treatment processes from clogging and damage.
