The global Mechanical Hacksaw Blade market size is predicted to grow from US$ 859 million in 2025 to US$ 1297 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Mechanical Hacksaw Blade reciprocating cutting blade, typically made of high-speed steel (HSS), carbon steel, or bimetal composites, designed for use in mechanical hacksaw machines to cut metals, plastics, and other rigid materials with precision, durability, and efficiency.

The mechanical hacksaw blade market industry chain begins upstream with raw materials such as high-speed steel, carbon steel, and alloy composites sourced from steel producers, followed by midstream activities where blade manufacturers design, cut, heat treat, grind, and temper blades with specific tooth pitches and geometries, often adding coatings for wear resistance, then moving downstream to distributors, industrial suppliers, and tool retailers who supply to metalworking companies, construction contractors, machine shops, and repair facilities, with the end market driven by industrial growth, infrastructure development, automotive and aerospace manufacturing, and small-scale workshop demand globally.

Production of mechanical hacksaw blades typically involves precision cutting of alloy or HSS steel strips, followed by shaping and milling teeth using high-accuracy machines, then undergoing heat treatment processes such as hardening and tempering to achieve durability and wear resistance, after which grinding ensures tooth sharpness and dimensional accuracy, and surface treatments or coatings like oxide finish or titanium nitride improve performance, with advanced methods including electron-beam welding for bimetal blades, CNC-controlled tooth profiling, and automated quality inspection
