## Abstracts

The global Mechanical Isolators market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Mechanical isolators can be used from hundreds of thousands of tons of equipment to lightweight precision instruments. They are usually used in places with static compression of more than 5 cm or in places where temperature and other environmental conditions do not allow the use of rubber.

The mechanical vibration isolator has large static compression, low natural frequency, good low-frequency vibration isolation, resistance to oil, water and solvent erosion, and is not affected by temperature changes; it will not age.
