Mechanical metering pump is a positive displacement pump used to accurately deliver a specific volume of fluid in a controlled manner. It is typically used in applications that require precise measurement of chemicals or other fluids, such as water treatment, chemical treatment, and oil and gas production. Mechanical metering pumps operate by using mechanical mechanisms such as pistons or diaphragms to discharge a precise volume of fluid in each stroke. A pump is usually driven by an electric motor or other power source, and the fluid delivery rate can be adjusted by changing the stroke length

or stroke rate of the pump. One of the main advantages of mechanical metering pumps is their ability to deliver consistent and accurate fluid volumes under various operating conditions. They are also known for their reliability, durability, and ease of maintenance.
