Mechanical release bearings are a bearing design designed to reduce friction and wear and increase the performance and life of mechanical equipment. It usually consists of an inner ring, an outer ring, balls (or rollers) and a cage. The balls roll between the inner ring and the outer ring, thereby reducing the direct contact between bearing parts, effectively reducing friction, achieving the purpose of reducing energy consumption and extending the service life of the bearing.

The global Mechanical Release Bearing market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
