This report focus on Mechanical Spring Starter market.

In layman terms it is a manually operated diesel engine starter. By winding a cranking handle the disc springs are compressed and when the potential energy in the springs are released by tripping, the starter pinion rotates the engine flywheel ring gear thus starting the diesel engine.

A mechanical spring starter is totally autonomous and does not need any external energy source except for manual power. It combines the reliability of hand winding with the power of spring mechanism. It is a direct bolt on replacement for electric, pneumatic or hydraulic starter used for starting direct injection diesel engines.
