The mechanical tripod turnstile is a channel gate based on the principle of pure mechanical transmission. It limits the one-way passage of people through the rotation of three rollers. Its core features are simple structure and strong durability. It does not require electric drive and relies on human power to push the rollers to achieve passage. The equipment is usually made of stainless steel or galvanized material, which has rust and corrosion resistance and is suitable for long-term use outdoors or in harsh environments, such as parks, factories, and stations. The passive design of the mechanical tripod turnstile allows it to operate normally in the event of power outages or failures, but it lacks electronic permission verification functions and is often used as a basic physical isolation facility. Some models can be upgraded to semi-automatic or fully automatic control by adding electronic modules.

United States market for Mechanical Tripod Turnstiles is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Mechanical Tripod Turnstiles is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
