A mechanical air fryer is a kitchen device that uses rapidly circulating hot air to cook food. It uses high-speed circulating hot air to fry the surface of the food until it is golden and crispy, thereby achieving an effect similar to deep-frying, but using air instead of oil. This method of cooking is designed to reduce the amount of oil used, thereby reducing the fat intake in food and making it healthier. It is usually suitable for various cooking methods such as frying, roasting, roasting, and baking, and can be used to make various foods such as French fries, chicken wings, vegetables, and meat. Compared with traditional frying methods, mechanical air fryers can reduce the use of oil, making food healthier, more convenient and safer.

The global Mechanical Type Air Fryer market size is projected to grow from US\$ 163 million in 2024 to US\$ 215 million in 2030; it is expected to grow at a CAGR of 4.7% from 2024 to 2030.
