## Abstracts

The global Media Converter Card market size is predicted to grow from US\$ 176 million in 2025 to US\$ 249 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

In 2025, global Media Converter Card production reached approximately 1,200 K units, with an average global market price of around 105 US\$/unit.

Media Converter Card is a plug-in or rack-mounted media conversion module used in network transmission systems to convert signals between different media types, most commonly between copper Ethernet and fiber optic links, or between different fiber interfaces, wavelengths, speeds and transmission protocols. Compared with standalone media converters, Media Converter Cards are usually installed in multi-slot chassis, managed converter platforms or industrial communication racks, allowing centralized power supply, network management, hot swapping, alarm monitoring and high-density deployment. They are widely used in telecom access networks, enterprise networks, industrial automation, transportation, security surveillance, utility communication and data center edge connectivity where long-distance transmission, electromagnetic isolation, legacy network extension and flexible fiber access are required.

The demand for Media Converter Cards is supported by the continued expansion of fiber-based communication infrastructure, industrial Ethernet upgrades, smart city projects, rail transit networks, power grid communication systems, surveillance backhaul and enterprise campus network modernization. Many existing networks still contain copper ports, legacy equipment and mixed-speed devices, creating long-term demand for cost-effective copper-to-fiber, fiber-to-fiber and protocol conversion instead of full equipment replacement. Business opportunities are strongest in managed chassis

systems, industrial-grade cards, Gigabit/10G conversion cards, PoE-related conversion, redundant power designs and remote management functions. Although integrated fiber switches and SFP-based equipment may replace some basic converters, Media Converter Cards remain attractive in scenarios requiring high port density, centralized maintenance, harsh-environment reliability, legacy system compatibility and gradual network migration.
