A barbed suture is a type of knotless surgical suture that has barbs on its surface. While suturing tissue, these barbs penetrate inside the tissue and lock them into place, eliminating the need for knots to tie the suture. Conventional sutures rely on a surgeon's ability to tie secure knots; barbed sutures provide a knotless alternative in some surgical situations. Barbed sutures are primarily used in cosmetic surgery.

Global top three manufacturers of Barbed Sutures occupied for a share over 80 percent, key players are Corza Medical, Johnson & Johnson, Medtronic, etc. North America is the largest market, has a share about 35%, followed by Asia-Pacific and Europe, with share about 32% and 28%, separately. In terms of product type, unidirectional is the largest segment, with a share about 70%. In terms of product application, the largest application is general surgery, with a share about 24%, followed by orthopedic surgery, gynecology and obstetrics.
