Microspheres are the most critical basic materials in the medical and pharmaceutical fields and are widely used in drug purification, drug delivery, diagnosis, medical aesthetics and other fields. Regenerative filled microspheres are the core components of regenerative injections, such as polycaprolactone microspheres (PCL), polylactic acid microspheres (PLLA), hydroxyapatite microspheres (CaHA) and new protein microspheres. Microsphere products for medical aesthetics have good biocompatibility, are not likely to cause inflammatory reactions and foreign body reactions, have appropriate fluidity, and are easy to shape and fix after implantation into the human body. They are safer, more natural, last longer, and can be mass-produced, making them popular filling materials.

The global Medical Beauty Microspheres market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
