Medical bovine bone gelatin is a gelatinous substance extracted from bovine bones and is mainly composed of collagen. This gelatin is widely used as a biomaterial in the medical field and has good biocompatibility and biodegradability. Because it is derived from natural animal tissue, medical bovine bone gelatin is compatible with human tissue and can be gradually absorbed and metabolized by the human body under appropriate conditions. Medical bovine bone gelatin is commonly used in surgery as a filler or scaffold to repair fractures or fill bone defects. It can also be used in soft tissue repair surgeries to help tissue heal. In addition, medical bovine bone gelatin can also be used as a carrier for drug release, fillers or implants in the oral and dental fields, etc. Due to its plasticity and biocompatibility, medical bovine bone gelatin has wide applications in the medical field and is considered an effective and safe biomaterial.

The global Medical Bovine Bone Gelatin market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
