Medical COC and COP are materials used in the medical field and meet medical grade standards. COC is a thermoplastic polymer made by copolymerizing cyclic olefin monomers with other monomers such as ethylene. In the medical field, it's a high - performance material. The presence of cyclic structures in its molecular chain endows it with many unique physical and chemical properties. COP is a polymer mainly obtained by polymerizing cyclic olefin monomers. It has a similar structure to COC, but the synthesis process may focus more on the polymerization of cyclic olefin monomers. It also shows excellent performance in medical applications.

United States market for Medical COC and COP is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
