The global Medical Cold Chain Temperature Logger market size is predicted to grow from US\$ 818 million in 2025 to US\$ 2567 million in 2032; it is expected to grow at a CAGR of 18.9% from 2026 to 2032.

Medical Cold Chain Temperature Logger refers to electronic temperature recording devices used to continuously monitor, record, store, display, and export temperature data during the transportation, storage, distribution, and handling of temperature-sensitive medical products. These products are mainly used for vaccines, pharmaceuticals, biologics, blood products, clinical trial materials, diagnostic reagents, cell and gene therapy products, laboratory samples, and other healthcare cold chain goods. In this report, the market mainly includes single-use USB temperature loggers, multi-use temperature data loggers, PDF temperature loggers, Bluetooth temperature loggers, NFC temperature loggers, Wi-Fi temperature loggers, cellular real-time temperature loggers, ultra-low temperature loggers, vaccine temperature loggers, and cloud-connected cold chain monitoring devices. The 2025 benchmark ASP is US\$55 / unit, shipment volume is 15,200k units, and average gross margin is 41%. The upstream industry chain includes temperature sensors, humidity sensors, lithium batteries, microcontrollers, memory chips, LCD screens, USB interfaces, Bluetooth modules, NFC modules, cellular modules, plastic housings, probes, calibration components, packaging materials, and cloud software components. The midstream includes device design, sensor calibration, firmware development, alarm setting, enclosure assembly, battery integration, waterproof testing, accuracy testing, data security validation, PDF report generation, compliance documentation, and logistics configuration. The downstream includes pharmaceutical manufacturers, vaccine distributors, hospitals, pharmacies, laboratories, blood banks, clinical trial logistics providers, third-party logistics companies, public health agencies, and healthcare cold

chain service providers.

Medical cold chain temperature loggers are gaining importance as healthcare supply chains require more accurate, traceable, and compliant temperature monitoring. Temperature excursions can affect the quality and safety of vaccines, biologics, diagnostic reagents, and specialty drugs, so cold chain stakeholders increasingly rely on electronic data loggers to support release decisions, shipment verification, audit trails, and regulatory documentation. Demand is supported by vaccine distribution, biologics growth, cell and gene therapy logistics, clinical trial decentralization, home healthcare, and stricter pharmaceutical cold chain compliance. Product development is moving toward real-time visibility, automated PDF reports, cloud-based data access, reusable devices, low-temperature monitoring, multi-sensor tracking, alarm notifications, longer battery life, and integration with logistics and quality management systems.
