Abstracts

The global Medical Cold Pack market size is predicted to grow from US$ 100 million in 2025 to US$ 131 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

In 2024, global Medical Cold Pack production reached approximately 29.15 million Pcs , with an average global market price of around US$ 3.3 per Pc. The global single-line production capacity ranges from 800k Pcs per year.A medical cold pack is a cryogenic physical therapy device used in healthcare. It is typically made of a non-toxic polymer gel or phase-change material encapsulated in a soft, waterproof casing. Its core function is to achieve localized cold therapy by maintaining a stable, low temperature (typically 0°C to 10°C) for a long period of time. Before use, it requires freezing to activate, solidifying the contents into a semi-solid state, allowing it to store and slowly release cold. Clinically, it is primarily used for cold compresses in acute injuries such as sprains, fractures, and postoperative swelling. By constricting blood vessels, it reduces inflammation and pain, inhibits bleeding and interstitial fluid exudation, and can also reduce fever, relieve muscle spasms, and provide local analgesia after anesthesia. Compared to traditional ice cubes, medical cold packs offer advantages such as temperature control, protection against frostbite, high plasticity, and reusability. They are a common medical consumable in hospitals, clinics, and home care settings.

The global medical cold pack industry chain's upstream core is supplied by chemical giants such as BASF and DuPont, which supply refrigerants like ammonium nitrate. Nippon Shokubai provides polymer gels. Non-woven fabrics are dominated by companies like Freudenberg, with raw material costs influenced by oil prices and environmental policies. Downstream applications are primarily in medical institutions (hospitals and clinics for postoperative care and vaccine cold chain), requiring FDA/CE certification. A diversified market is also emerging, with applications in sports centers (for sports injury emergency care), homes (for portable cold compresses), and

supermarkets. Demand is driven by rising medical spending and public health awareness, while environmental trends are driving technological innovation in reusable cold packs.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Medical Cold Pack Industry Forecast” looks at past sales and reviews total world Medical Cold Pack sales in 2025, providing a comprehensive analysis by region and market sector of projected Medical Cold Pack sales for 2026 through 2032. With Medical Cold Pack sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Medical Cold Pack industry.

This Insight Report provides a comprehensive analysis of the global Medical Cold Pack landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Medical Cold Pack portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms’ unique position in an accelerating global Medical Cold Pack market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Medical Cold Pack and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Medical Cold Pack.

This report presents a comprehensive overview, market shares, and growth opportunities of Medical Cold Pack market by product type, application, key manufacturers and key regions and countries.
