## Abstracts

The global Medical Cold Plasma Equipment for Wound Healing market size is predicted to grow from US\$ 124 million in 2025 to US\$ 434 million in 2032; it is expected to grow at a CAGR of 20.1% from 2026 to 2032.

In 2025, global sales of medical cold plasma equipment for wound healing reached 9,627 units, with an average price of US\$13,125 per unit.

Medical cold plasma equipment for wound healing refers to a non-thermal atmospheric plasma therapy system specifically designed for chronic wound management, acute trauma repair, and postoperative incision care. It is a physical therapy device that generates reactive oxygen species (ROS/RNS) to achieve sterilization, anti-inflammation, angiogenesis promotion, and accelerated epithelial regeneration.

The core raw materials for medical cold plasma equipment include high-purity inert gases (helium or argon, 99.99% or higher, used in jet-type equipment), precision electrodes and dielectric materials (tungsten needles/stainless steel electrodes, quartz glass tubes, alumina ceramic dielectric layers), high-voltage/radio frequency power supply systems (kV-level pulse or MHz-level radio frequency power supplies and impedance matching devices), and medical-grade structural components (biocompatible plastic shells, Teflon gas tubing). For radiofrequency surgical equipment, disposable saline irrigation tubing and plasma tip electrode consumables are also required.

In terms of cost structure, the equipment exhibits characteristics of 'high R&D amortization and small-to-medium batch production': Initial R&D investment in plasma physics and medical safety verification is substantial (accounting for 40-60% of initial costs); the core high-voltage power supply and precision gas control module (mostly

imported) account for 30-40% of hardware costs; and medical-grade certifications (CE/FDA/NMPA) and clinical trial fees further increase unit costs. During the operation phase, the continuous consumption of helium constitutes the main consumable expense (jet equipment consumes several liters per hour), resulting in a single treatment gas cost reaching tens of yuan.

United States market for Medical Cold Plasma Equipment for Wound Healing is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
