## Abstracts

The global Medical Device Disinfection Service market size is predicted to grow from US\$ 525 million in 2025 to US\$ 792 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Medical Device Disinfection Service is a specialized process for killing or removing pathogenic microorganisms from reusable medical devices. This service aims to reduce the number of microorganisms on the devices to a safe level, but does not require absolute sterility; the core objective is to prevent the risk of cross-infection. The process typically includes a strict closed loop of collection, sorting, cleaning, disinfection, drying, inspection, packaging, and distribution. This service addresses the high costs and compliance pressures of medical institutions building their own processing centers, ensuring reliable and traceable disinfection quality through professional and centralized operations.

Global pricing for Medical Device Disinfection Services varies significantly, ranging from a few dollars to hundreds of dollars per treatment, primarily depending on the complexity of the device (e.g., endoscopes are significantly more expensive than routine instruments) and the level of sterilization. Core costs include depreciation of specialized equipment, highly skilled personnel, compliance verification, chemical consumables, and utilities (water, electricity, gas). Due to high barriers to entry and its essential nature for healthcare institutions, large-scale service providers typically maintain a gross profit margin of 30%-50%. Their premium primarily stems from reliable quality assurance, a rigorous traceability system, and cost savings for hospitals' operational and management expenses.

The global Medical Device Disinfection Service market is characterized by 'regulatory

drivers and differentiated business models.' The North American and European markets are the most mature, with stringent infection control regulations driving standardization in hospital central supply rooms. Emerging Asia-Pacific markets, represented by China, are experiencing rapid growth, with policies promoting a shift from decentralized departmental self-processing to centralized, socialized supply. Demand is huge, but standards and talent are still evolving. The global trend is shifting from basic cleaning and disinfection to automated, information-based, and traceable end-to-end device management services to reduce hospital infection risks and operating costs.
