Medical device wearable adhesives refer to specialized adhesive materials used to attach medical devices or components to the skin for extended periods. These adhesives are designed to be biocompatible, skin-friendly, and capable of adhering securely to the skin while allowing for comfortable wear and easy removal.

The primary purpose of medical device wearable adhesives is to ensure that medical devices, such as wearable sensors, electrodes, infusion sets, or patches, stay in place on the patient's skin for the duration of their intended use. These adhesives are particularly important in applications where continuous monitoring, drug delivery, or therapeutic interventions are required over extended periods, such as in the management of chronic conditions or during hospitalization.

Medical device wearable adhesives are used across various healthcare settings, including hospitals, clinics, home care, and research facilities, to facilitate the safe and effective use of wearable medical devices for monitoring, diagnosis, treatment, and therapy management.
