Medical Devices Recycling and Decommissioning refers to the comprehensive process of managing medical equipment at the end of its lifecycle. Recycling involves the collection, sorting, and reprocessing of discarded medical devices or their components to recover valuable materials that can be used in the manufacturing of new products. This often includes the safe dismantling of devices to separate plastics, metals, and electronic parts. Decommissioning, on the other hand, is the process of officially taking a medical device out of service. This can involve procedures to ensure the device is no longer functional, rendering it safe for disposal or further processing, and complying with regulatory requirements for retirement. The combined practice aims to minimize environmental impact, conserve resources, and ensure the safe and responsible handling of medical equipment throughout its entire lifespan.

United States market for Medical Devices Recycling and Decommissioning is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
