Every year, avoidable healthcare infections threaten hundreds of millions of people around the world. Infection prevention in healthcare relies heavily on the sterilization and decontamination of instruments and medical devices. Improper sterilization of surgical tools and reusable equipment persists in many hospital settings, leading to major health concerns. Sterilization and decontamination operations are complex, requiring complex infrastructure and equipment, and multiple stages that need to be completed correctly, starting with equipment collection, processing, storage, and distribution throughout the facility. Risks posed by the current widespread pandemic, growing public awareness about antimicrobial resistance, and rising chronic complications are the major factors driving the need for safe and aseptic practices in hospitals and other healthcare settings. Furthermore, increasing research activities in the biopharmaceutical industry has also led to an increase in the demand for autoclaves.
