Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Medical grade N95 respirator masks (named because they filter out 95% of small particles) are designed for the highest-risk environments, such as surgery or other situations where sprays and aerosols carrying the virus are commonly emitted. N95s consequently provide the strongest protection against illness as they stop viruses and bacteria from reaching the wearer. These masks seal the area around the face completely when properly fitted, but they make breathing more of an effort. They also require the use of annual training and fit tests to ensure that the wearer is still using them safely. Untrained users may not be able to fit them properly to their faces, or may compromise the seal by adjusting it incorrectly.
