The global Medical Grade Polycaprolactone (PCL) market size is predicted to grow from US\$ 45.95 million in 2025 to US\$ 81.59 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

Polycaprolactone (PCL) is a long-term biodegradable polyester with a low melting point of around 60°C and a glass transition temperature of about 76°C. PCL is prepared by ring-opening polymerization of ε-caprolactone and is FDA approved for drug delivery devices and as adhesion barriers. PCL is highly soluble in chlorinated hydrocarbons and can be used for thermal processing like extrusion, fiber spinning, injection molding and 3D-printing.

As a biodegradable polyester material, medical-grade polycaprolactone (PCL) has shown broad application prospects in the medical field due to its excellent biocompatibility, controllable degradability and mechanical properties.

In the global medical-grade PCL market, Ingevity, Daicel and Hunan Juren occupy the main market share. The core applications of medical-grade PCL include drug sustained-release systems, tissue engineering scaffolds, medical beauty regeneration materials and medical consumables (radiotherapy positioning mask), etc. The technical development direction focuses on personalized medicine and 3D printing (such as implantable PCL microspheres), composite biomaterials (such as PCL and hydroxyapatite composite scaffolds to shorten bone repair time by 30%), intelligence (pH-sensitive PCL to achieve precise drug release) and green manufacturing.
