Medical hazmat suits are full covering protective gear worn by workers, medical personnel, emergency response teams, and the armed services to provide personal protection from chemical, biological, or radioactive hazards that may be present in the environment. Hazmat is a contraction of the words hazardous material and refers generally to any type of protective gear that is worn to provide protection against dangerous liquids, gases, and forms of radiation. There are 4 different levels of hazmat suit which are classified from Type A (the most protective) to Type D (the least protective). The higher-level hazmat suits, Type A and Type B make use of Self-Contained Breathing Apparatus (SCBA), while Type C may require the use of a filtering respirator or for Type D no respirator is required. Depending on the nature of the potential hazard to which personnel may be exposed the proper hazmat suit can be selected.
