Medical implantable PEEK (polyether ether ketone) is a high-performance, biocompatible polymer used in the manufacturing of medical implants. PEEK is known for its exceptional mechanical properties, such as high strength, stiffness, and resistance to wear and chemical degradation. It is radiolucent, meaning it does not interfere with imaging techniques like X-rays, CT scans, or MRIs, which is beneficial for post-operative monitoring. PEEK is often used as an alternative to metals in spinal fusion devices, orthopedic implants, dental implants, and other medical devices due to its ability to mimic the mechanical properties of bone, reducing stress shielding and promoting better integration with the body. Its biocompatibility and versatility make PEEK a preferred material for long-term implantable medical devices.
