The global Medical Low Temperature Plasma Disinfection Cabinet market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Medical low-temperature plasma disinfection cabinet uses H₂O₂ (hydrogen peroxide) as the sterilization medium. Its gaseous molecules are excited by specific electromagnetic waves under vacuum conditions to form low-temperature plasma. Many charged particles have high thermal kinetic energy (up to several thousand volts), which instantly and quickly break down, etch, and oxidize the proteins and nucleic acids in the microorganisms attached to the surface of the instrument, inactivating them and achieving the purpose of sterilizing the instrument. After sterilization, the H₂O₂ plasma finally recombines into a small amount of water vapor, with no harmful substances remaining, no harm to medical staff, and no pollution to the environment. Medical plasma disinfection cabinet can perform low-temperature disinfection and drying of medical equipment and other items. It has strong disinfection function, fast and lossless, safe and environmentally friendly, longer life, and wide application. The equipment is mainly suitable for the sterilization of metal and non-metal instruments, especially for precision instruments that are afraid of heat and humidity, and can be widely used in operating rooms, supply rooms and other treatment rooms of medical equipment.
