The global Medical Non-ionic Contrast Agent market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Due to the improvement of the chemical structure, non-ionic contrast agents have two main advantages over ionic contrast agents: most of the adverse reactions of contrast agents are related to high osmosis and charging. The distinguishing feature of non-ionic contrast agents is low osmotic pressure. It is uncharged, so it will not destabilize the internal environment; non-ionic contrast agents have less impact on peripheral blood vessels, pulmonary circulation vessels and cardiac conduction systems, so there are fewer sequelae, and they can be used for cardiovascular angiography.
