The global Medical Oxygen Concentrator Systems market size is predicted to grow from US\$ 2007 million in 2025 to US\$ 2408 million in 2032; it is expected to grow at a CAGR of 2.6% from 2026 to 2032.

Medical Oxygen Concentrator Systems are medical devices used to deliver a concentrated flow of oxygen to a patient. An oxygen concentrator takes in air and purifies it for use by people requiring medical oxygen due to low oxygen levels in their blood. In 2025, global Medical Oxygen Concentrators sales reached approximately 4,151.52 K Units, with an average price of 494 US\$/Unit.

The market for medical oxygen concentrator systems is primarily driven by the rising prevalence of chronic respiratory diseases, such as chronic obstructive pulmonary disease (COPD), asthma, and sleep apnea, which continue to increase due to aging populations, air pollution, and lifestyle-related health issues. At the same time, global demographic aging is accelerating the demand for long-term oxygen therapy, particularly in home care settings, as healthcare systems seek cost-effective alternatives to prolonged hospital stays. Technological advancements, including high-efficiency pressure swing adsorption (PSA), AI-enabled oxygen flow control, and integrated blood oxygen monitoring, are significantly improving device performance, safety, and user experience, thereby expanding adoption among both patients and healthcare providers.
