A Medical Plaster Saw, also known as an Orthopedic Plaster Saw, is a specialized electric or pneumatic surgical instrument used for the removal of plaster or fiberglass casts from patients. It is designed with a small oscillating blade that vibrates rapidly but does not rotate, allowing precise and controlled cutting through the cast material without harming the patient's skin. The saw's blade is typically serrated to ensure effective cutting and most modern plaster saws have a vacuum system to remove the cast dust generated during the cutting process, enhancing visibility for the healthcare practitioner.
